# Rapport d'Optimisation Nina Carducci

# **Sommaire**

- Comparatif avant et après optimisation	. 2
II - Détails des optimisations effectuées	3
1) Optimisation des performances	3
2) Optimisation du SEO	7
III - Accessibilité du site	.10
V - Détails de réalisation additionnelles à la demande du client	11
V - Conclusion	12
Annexes	13
Rapport complet de l'audit Lighthouse	13
Rapport complet de l'audit GTMetrix	17

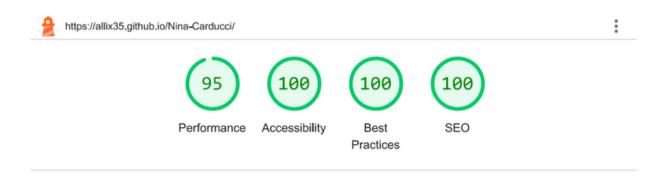

# Comparatif avant et après optimisation

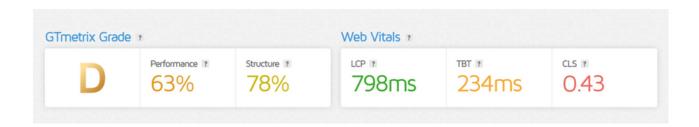

## **Audit LightHouse avant optimisation:**

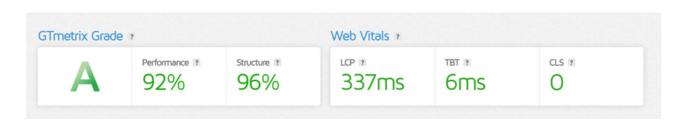

## Audit LightHouse après optimisation:

# **Audit GTmetrix avant optimisation:**

# Audit GTmetrix après optimisation :

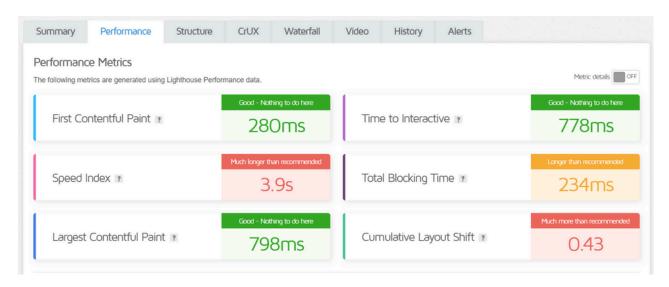

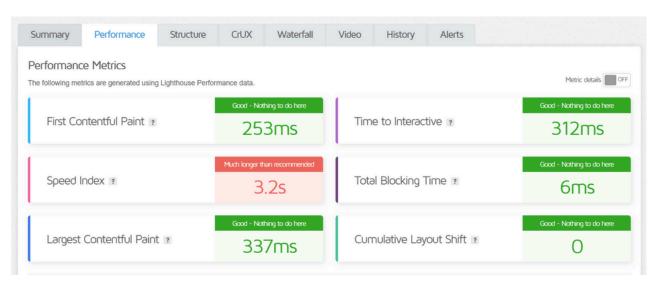

# Détails des optimisations effectuées

# 1) Optimisation des performances :

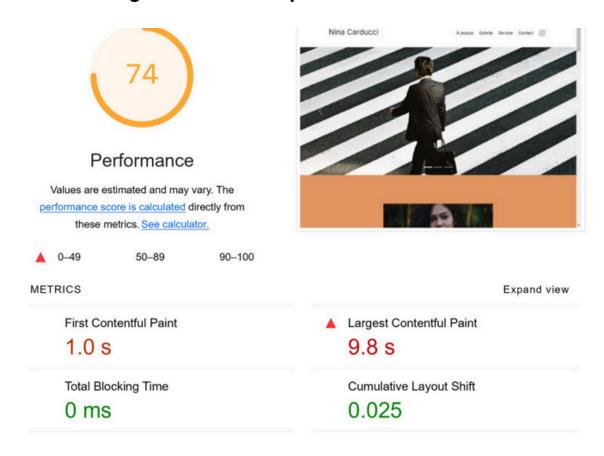

## **Performance GTmetrix avant optimisation:**

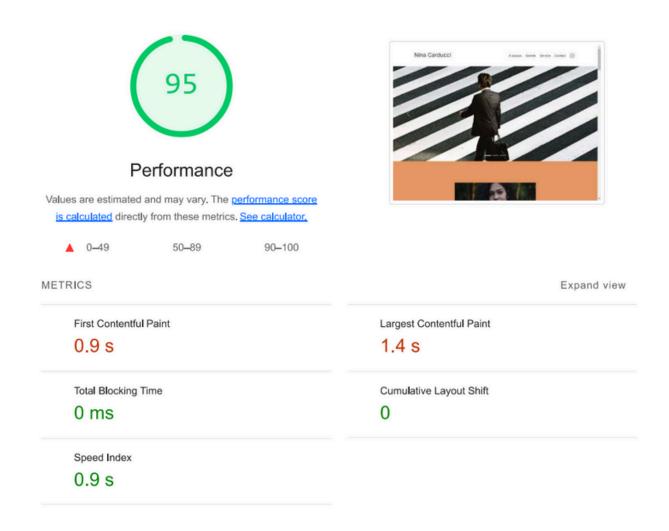

# Performance GTmetrix après optimisation :

## **Performance LightHouse avant optimisation:**

## Performance LightHouse après optimisation:

# Eléments optimisés :

## 1) CSS/JS/HTML:

- Minification des fichiers CSS et JS et modification des chemins dans les liens et scripts de l'index.html.
- Suppression du code CSS inutile :

```
#gallery {
    /* min-height: 100vh; */
}
```

 Activation de la compression Gzip pour compresser les fichiers CSS, JS et HTML :

# Check Gzip/Brotli Compression

https://allix35.github.io/nina-		
Results for: https://allix35	.github.io/nina-carducci/	
Gzip Is Enabled		
Original Size:	13.51 KB	
Gzip Size (compressed):	4.25 KB	
Compression %:	68.51% is compressed	
HTTP Status:	200	
Request Time:	0.0575 ms	
Compression Time:	0.0008 s	
Content Type:	text/html	
Server:	GitHub.com	

- Activation du cache navigateur via le fichier .htaccess :
  - a. Améliore la performance du site grâce à la mise en cache et la compression.
  - b. Sécurise le site contre certaines attaques.
  - c. Force HTTPS, HTTP/2 et empêche les répertoires visibles.
  - d. Optimise le SEO grâce à une meilleure vitesse de chargement.
- Scripts en bas de page avec attributs defer pour éviter le blocage du rendu :
  - e. Script Defer : Se charge "en arrière-plan", puis s'exécute lorsque le DOM est entièrement construit.
- Optimisation du chargement des polices Google Fonts (fontdisplay: swap;).

## 2) Images:

- Conversion des images .png et .jpg en .webp.
- Images compressées avec Squoosh et ImageMagik

### Poids avant optimisation:

Total Page Size - 29.6MB

## Poids après optimisation:

Total Page Size - 897KB

- Mise en place de Lazy Loading pour éviter de charger les images inutiles immédiatement.
- Optimisation de l'image principale affichée en premier (précharger avec <link rel="preload">).
- Ajout des attributs WIDTH et HEIGHT aux images pour permettre :
  - a. De réserver l'espace avant le chargement
  - b. D'améliorer le FCP (First Contentful Paint) = Affichage du premier élément visible.
  - c. D'améliorer le LCP (Largest Contentful Paint) = Temps pour charger l'élément principal.
  - d. D'empêcher les décalages.

## 2) Optimisation du SEO

## Eléments optimisés :

## a) Référencement local:

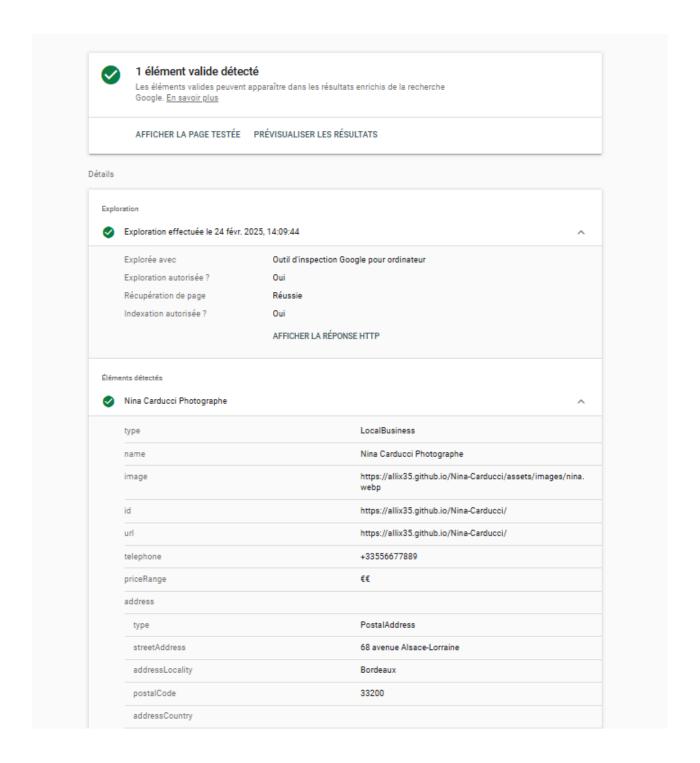

- Intégration d'un script JSON-LD conforme à Schema.org pour informer Google des informations locales.
- Intégration de Sitemap avec URL locales spécifiques : chaque section du site (à propos, services, contact) est répertoriée avec une priorité adaptée dans le fichier sitemap.xml.

## b) Référencement global :

- Balises méta SEO enrichis (title, description, keywords).
- Open Graph et Twitter Cards détaillées avec des images adaptées aux réseaux sociaux.
- Implémentation d'un fichier robots.txt pour mieux indexer le contenu.
- Ajout des balises sémantiques (<header>, <main>, <section>, <footer>) pour améliorer la compréhension du contenu par Google.
- Amélioration et réorganisation des balises titres <h>.
- Ajout d'un fichier favicon pour améliorer la visibilité dans les onglets de navigateur et les signets.

# Rapport de Rich Snippet Google

## Référencement local fonctionnel :

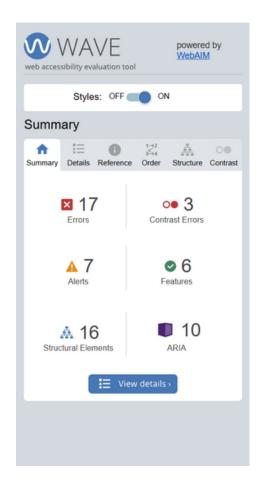

type	Country
name	FR
geo	
type	GeoCoordinates
latitude	44.8378

## **WAVE** avant optimisation:

# Eléments optimisés :

- Ajout de l'attribut alt sur les images.
- Ajout d'un < label for > au formulaire.
- Ajout de lang="fr" dans l'index.
- Amélioration des titres <h1>, <h2>,
   <h3>, <h4>, <h5>, <h6>.
- Amélioration des contrastes :
  - a. Couleur du texte des catégories.
  - b. Agrandissement des flèches.
- Ajout de :
  - a. Aria-label : Pour fournir un texte alternatif pour les éléments non textuels.
  - b. Aria-hidden="true" : Pour masquer les éléments décoratifs.

# **WAVE** après optimisation:

# Détails de réalisation additionnelles à la demande du client

- Modification du contenu :
  - a. Ajout d'un footer avec les informations de contact (Adresse, téléphone, horaires).
- Mise en place du référencement local avec Shema.org.
- Ajout des balises Meta pour les réseaux sociaux.

Après l'application de ces optimisations :

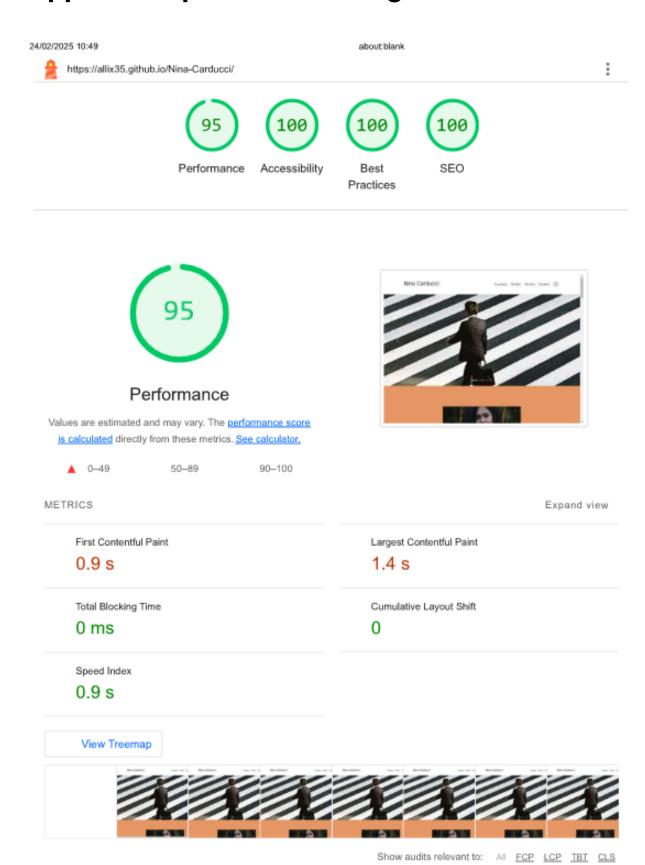

Performances Lighthouse: Note > 90% sur toutes les catégories (Performance, SEO, Accessibilité, Best Practices).

Référencement SEO : Amélioration du positionnement sur les moteurs de recherche grâce à un contenu mieux structuré et optimisé.

Réduction du temps de chargement : Temps de chargement diminué de manière significative.

Meilleure accessibilité : Conformité aux normes d'accessibilité (vérifiée via l'outil WAVE).

DIAGNOSTICS

about:blank 1/4

1/02/20	25 10:49 about:blank	
•	Properly size images — Potential savings of 424 KiB	~
•	Largest Contentful Paint element — 1,350 ms	~
	Image elements do not have explicit width and height	~
	Serve static assets with an efficient cache policy — 19 resources found	~
0	Initial server response time was short — Root document took 140 ms	~
0	Avoid large layout shifts — 1 layout shift found	~
0	Avoids enormous network payloads — Total size was 1,041 KiB	~
0	Avoids an excessive DOM size — 137 elements	~
0	Avoid chaining critical requests — 2 chains found	~
0	JavaScript execution time — 0.1 s	~
0	Minimizes main-thread work — 0.4 s	~
0	Minimize third-party usage — Third-party code blocked the main thread for 0 ms	~
0	Avoid long main-thread tasks — 1 long task found	~

# Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

### ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on conducting an accessibility review.

# Rapport complet de l'audit GTMetrix

**GTmetrix** The web should be fast.

# **Executive Summary**

# Performance Report for:

https://allix35.github.io/Nina-Carducci/

Report generated: Fri, Feb 21, 2025 4:49 AM -0800

Test Server Location: | Vancouver, Canada

Using: 6 Chrome 117.0.0.0, Lighthouse 11.0.0

Performance 92%

Structure 96% L. Contentful Paint 337ms

T. Blocking Time

6ms

C. Layout Shift

### Top Issues

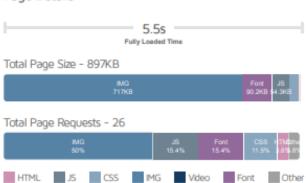

### Focus on these audits first

These audits likely have the largest impact on your page performance.

Structure audits do not directly affect your Performance Score, but improving the audits seen here can help as a starting point for overall performance gains.

### Page Details

### How does this affect me?

Modern web users have a short attention span and expect a fast and sean website experience. Delivering that fast experience can result in more traffic, more conversions, and more happiness.

As if you didn't need more incentive, Google use Page Speed and Page Experience (including Web Vitals) signals in their ranking algorithm.

### About GTmetrix

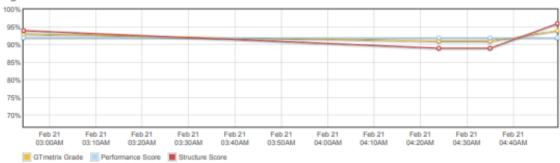

GTmetrix was developed as a tool for customers GTmetrix to easily test the performance of their webpages.

# **GT**metrix

# Performance

### Performance Metrics

First Contentful Paint  How quickly content like text or images are painted onto your page. A good user experience is 0.9s or less.	Good - Nothing to do here	Time to Interactive  How long it takes for your page to become fully interactive. A good user experience is 2.5s or less.	Good - Nothing to do here
Speed Index  How quickly the contents of your page are visibly populated. A good user experience is 1.3s or less.	Much longer than recommended	Total Blocking Time  How much time is blocked by scripts during your page loading process. A good user experience is 150ms or less.	Good - Nothing to do here
Largest Contentful Paint  How long it takes for the largest element of content (i.e., a hero image) to be painted on your page. A good user experience is 1.2s or less.	Good - Nothing to do here	Cumulative Layout Shift  How much your page's layout shifts as it loads. A good user experience is a score of 0.1 or less.	Good - Nothing to do here

### **Browser Timings**

Redirect	Oms	Connect	33ms	Backend	9ms
TTFB	42ms	DOM Int.	213ms	DOM Loaded	225ms
First Paint	253ms	Onload	327ms	Fully Loaded	5.5s

# **GT**metrix

# **Structure Audits**

IMPACT	AUDIT	
Med	Use explicit width and height on image elements CLS	3 images found
Med	Serve static assets with an efficient cache policy	Potential savings of 706KB
